

Webstore enhancements

Some new features have recently been added to webstore including:

- Quantity Breaks - if you select an option break of 5 and a quantity of 3, it will automatically put 15 in the shopping cart. The sales order process in Greentree will work out the appropriate price according to the setup quantity break.
- A new "add to cart" button has been provided. If you create a button to replace the current "buy now" button, and name it "add to cart" in the template, you will then add the item to the shopping cart without the user moving to the shopping cart. This means you can add items and not have to keep returning to the catalogue.
- A new system script has been provided for importing inventory item image file names for display within webstore. This supports both thumbnail and larger images so that you can provide a "click here to enlarge" option for display of the larger image.

Webstore Catalogue All prices tax inclusive
